AI-Powered Turnaround & Recovery Management

You lead the relationship and the turnaround.

From the first conversation to dependable operation.

Recover. Rebuild. Outperform.

The team needs a workable shared understanding

Plans, records and operating experience do not automatically agree

Uncertain information

Which source supports this conclusion?

Competing explanations

What would change our interpretation?

Work between people

Who accepts the next responsibility?

Support from the first conversation

Discovery and Engagement within Recovery Planning and Execution Intelligence

Understand

Preserve their concern, sources and competing accounts.

Present your method

Use your approved approach, capabilities and examples.

Shape the engagement

Review the proposed scope, conditions and next decision.

An initial account begins the record. It does not establish a mandate.

Carry the understanding into assessment

A reviewed handover preserves what was learned and what was promised

The entry package

Sources and open questions
Method and proposal versions
Accepted obligations
Permitted context and access

The authority to proceed

Discovery and information use
Adviser engagement
Phoenix assessment scope
Receiving owner acknowledgment

A sent proposal is not authorization. A later correction can reopen an assumption.

How Phoenix fits together

Support starts in discovery and continues within the agreed scope

Recovery Planning and Execution Intelligence

Shared context, decisions and follow-through across the journey

Discovery

Understand the client
Present your method
Shape and authorize

Paid assessment

Investigate and define
Model and rehearse
Accept the findings

Delivery

Engineer and connect
Prove and activate
Stabilize and transfer

Operation

Use the capability
Verify business value
Authorize improvements

Manage recovery • Establish capabilities • Separate authority at each commitment

Recovery Planning and Execution Intelligence

A shared working context that helps the team decide what to do next

Question

Why is completed work still blocked from billing?

Investigate

Inspect the records. Compare explanations. Identify missing evidence. Prepare the human decision.

Evidence, decisions and action

A consequential interpretation stays open to inspection and challenge

01

Inspect the sources

Keep conflicting accounts and uncertainty visible.

→

02

Challenge and decide

Compare options. Record the human decision and its basis.

→

03

Carry the work through

Accept responsibility. Verify the required effect.

New evidence → affected assumptions and commitments → authorized adjustment

ASCENT

Kainora’s method alongside the adviser’s approved approach

01 **Align and authorize**

02 **Assess and define**

03 **Model and rehearse**

04 **Engineer and connect**

05 **Prove and activate**

06 **Stabilize and transfer**

07 **Operate and evolve**

Assessment includes stages 2 and 3.

Align and authorize includes discovery, method presentation and engagement formation.

Recovery Capability Rehearsal

An installed synthetic experience near the end of a scoped paid assessment

See it

A guided walkthrough makes the proposed work understandable.

Try it

Named stakeholders explore ordinary work, exceptions and authority.

Revisit it

Narrated recordings preserve the same model and scenario version.

Experience and refine the proposed work. Live operation and benefits require subsequent evidence.

Copper Basin: completed work to supported billing

Fictional industrial-services business • synthetic scenario

Ready	Blocked	Outcome unknown	Receiver-accepted
$37,000	**$82,000**	**$21,000**	**$0**

CB-J02 · $18,000

Scope authorization, cost review, accepted ownership and controller approval remain unresolved.

Initial register: $140,000. Ready and receiver acceptance do not establish revenue or cash.

A bounded paid assessment

Deepen the reviewed discovery context and experience the proposed work

Establish the basis

Sources, open questions, accepted obligations, options and acceptance conditions.

Experience the proposed work

Installed rehearsal, stakeholder use, narrated walkthroughs and reviewed findings.

Next: recovery management support, capability delivery, both, or a different course.

Bring one consequential recovery situation

What brought this to your attention?

What have you tried? What would make the next conversation useful?

Let’s examine it with the person responsible and determine whether a scoped assessment would help.
